

BALL and ROLLER BEARINGS

Catalog #A1000 – VI

WARRANTY

NTN bearings are warranted to be free from defects in materials and workmanship. The obligation of NTN under this warranty is limited to replacing any bearing which is proven to be defective within one year of purchase, under the following provisions:

1. The application of the product was approved by NTN.
2. The product is delivered to NTN with transportation charges prepaid.
3. Analysis of NTN verifies that the product was properly handled, mounted, lubricated and not subjected to abuse.

THIS WARRANTY IS IN LIEU OF ALL WARRANTIES OF MERCHANTABILITY, FITNESS FOR PURPOSE, OR AL OTHER WARRANTIES, EXPRESSED OR IMPLIED.

NTN shall not be liable for any special, indirect, or consequential damages. The remedies set forth herein are exclusive, and the liability of NTN with respect to any contract or sale or anything done in connection therewith, in contract, in tort, under any warranty, or otherwise, shall not exceed the price of the bearing on which such liability is based.

Although care has been taken to assure the accuracy of the data compiled in this catalog, NTN does not assume any liability to any company or person for errors or omissions.

NTN is one of the three largest bearing companies in the world. With facilities at the hub of industrial centers around the globe, NTN Bearing Corporation is in an enviable position to best serve its customers, both domestic and worldwide.

In North America, as in all our manufacturing facilities, we attain maximum efficiency using our automated production equipment and processes to produce quality high-volume standard bearing sizes. Low-volume bearings and sizes are manufactured in a single facility and then exported worldwide according to customer requirements. All bearing types and sizes currently used in North America are in inventory at warehouses across the continent.

To best serve our customers, NTN devotes all resources to a single objective: production of the finest quality ball and roller bearings. All of our plants use advanced processing and high speed automated production equipment, engineered and built by NTN, to support our capacity for ultra-high quality bearings. NTN's Statistical Process Control programs ensure

that during the production run, every bearing produced meets or exceeds AFBMA and ISO standards. Electro-mechanical quality inspection is present at every phase of manufacturing.

Proof of NTN's success at meeting our objective are the many quality awards received from our customers. Another cherished award was received in 1954 when NTN became the first bearing manufacturer to win the Deming Prize. This prestigious award is given for outstanding performance above all mechanical industries in statistical quality control, and efficiency of machinery and management. NTN's rigid quality standards originated with the company in 1918, and is the basis for every product innovation and corporate decision made today.

NTN's highly trained employees are here to serve your engineering, sales, and manufacturing needs. Customers receive unparalleled attention through technical assistance from over 700 engineers in North America, Europe and the Far East — all linked through 24-hour global communications. This provides

you with access to support from research and development engineers, application experts and field engineers. Our extensive testing and development laboratories keep us at the leading edge of bearing technology. NTN's North American Technical Center located in Ann Arbor, Michigan, is fully equipped with the latest in metallurgical, mechanical, metrology, and electro-mechanical test equipment.

NTN became a world leader through attention to our customers' needs and constant technological innovations. Value-added bearings are NTN's forte. Our quality level allows purchasers to take them directly from receiving dock to application, eliminating incoming inspection costs. They add value to your end product with longer lifetime, less downtime and less maintenance.

- NBCA Irving, TX, office and warehouse occupied.
NBCA Headquarters building expanded. (Des Plaines, IL)
NBCA Midwest and Central sales offices established. (Des Plaines, IL)
NBCA Peopria, IL, sales office opened.
- 1984 Ground broken for Elgin, IL, tapered roller bearing manufacturing facility.
- 1985 Established Toyo Bearing Nagano Co. Ltd.
Bearing production technology licensed to National Engineering Industries Ltd. (India)
Established NTN-Bower Corporation, a joint venture with Federal-Mogul Corporation. (U.S.A.)
- 1986 Constructed (in Kuwana Plant) Japan's first plant dedicated to aerospace bearings.
- 1987 NTN-Bower Corporation became 100% owned affiliate.
- 1988 Established NTN Technical Center (U.S.A.) Inc. (Ann Arbor, MI)
- Established Unidrive Pty. Ltd., a joint venture manufacturer of constant velocity joints in Australia.
- Ground broken for Elgin, IL, bearing hub unit manufacturing facility.
- 1989 Built new building for R&D at Iwata Plant.
Merged with Toyo Bearing Nagano Co.
Established NTN Driveshaft Inc. (Columbus, IN — CVJ facility)
Renamed parent company NTN Corporation.
Bearing hub unit production began at Elgin, IL, facility.
- 1990 Built new building for R&D at Kuwana Plant.
NTN USA Corporation founded as headquarters in the U.S.A.
- 1991 NBCA and NTN USA Corp. occupied new Head Office in Mt. Prospect, IL.
NBCA Eastern Region occupied new offices, training center and warehouse in Exton, PA.

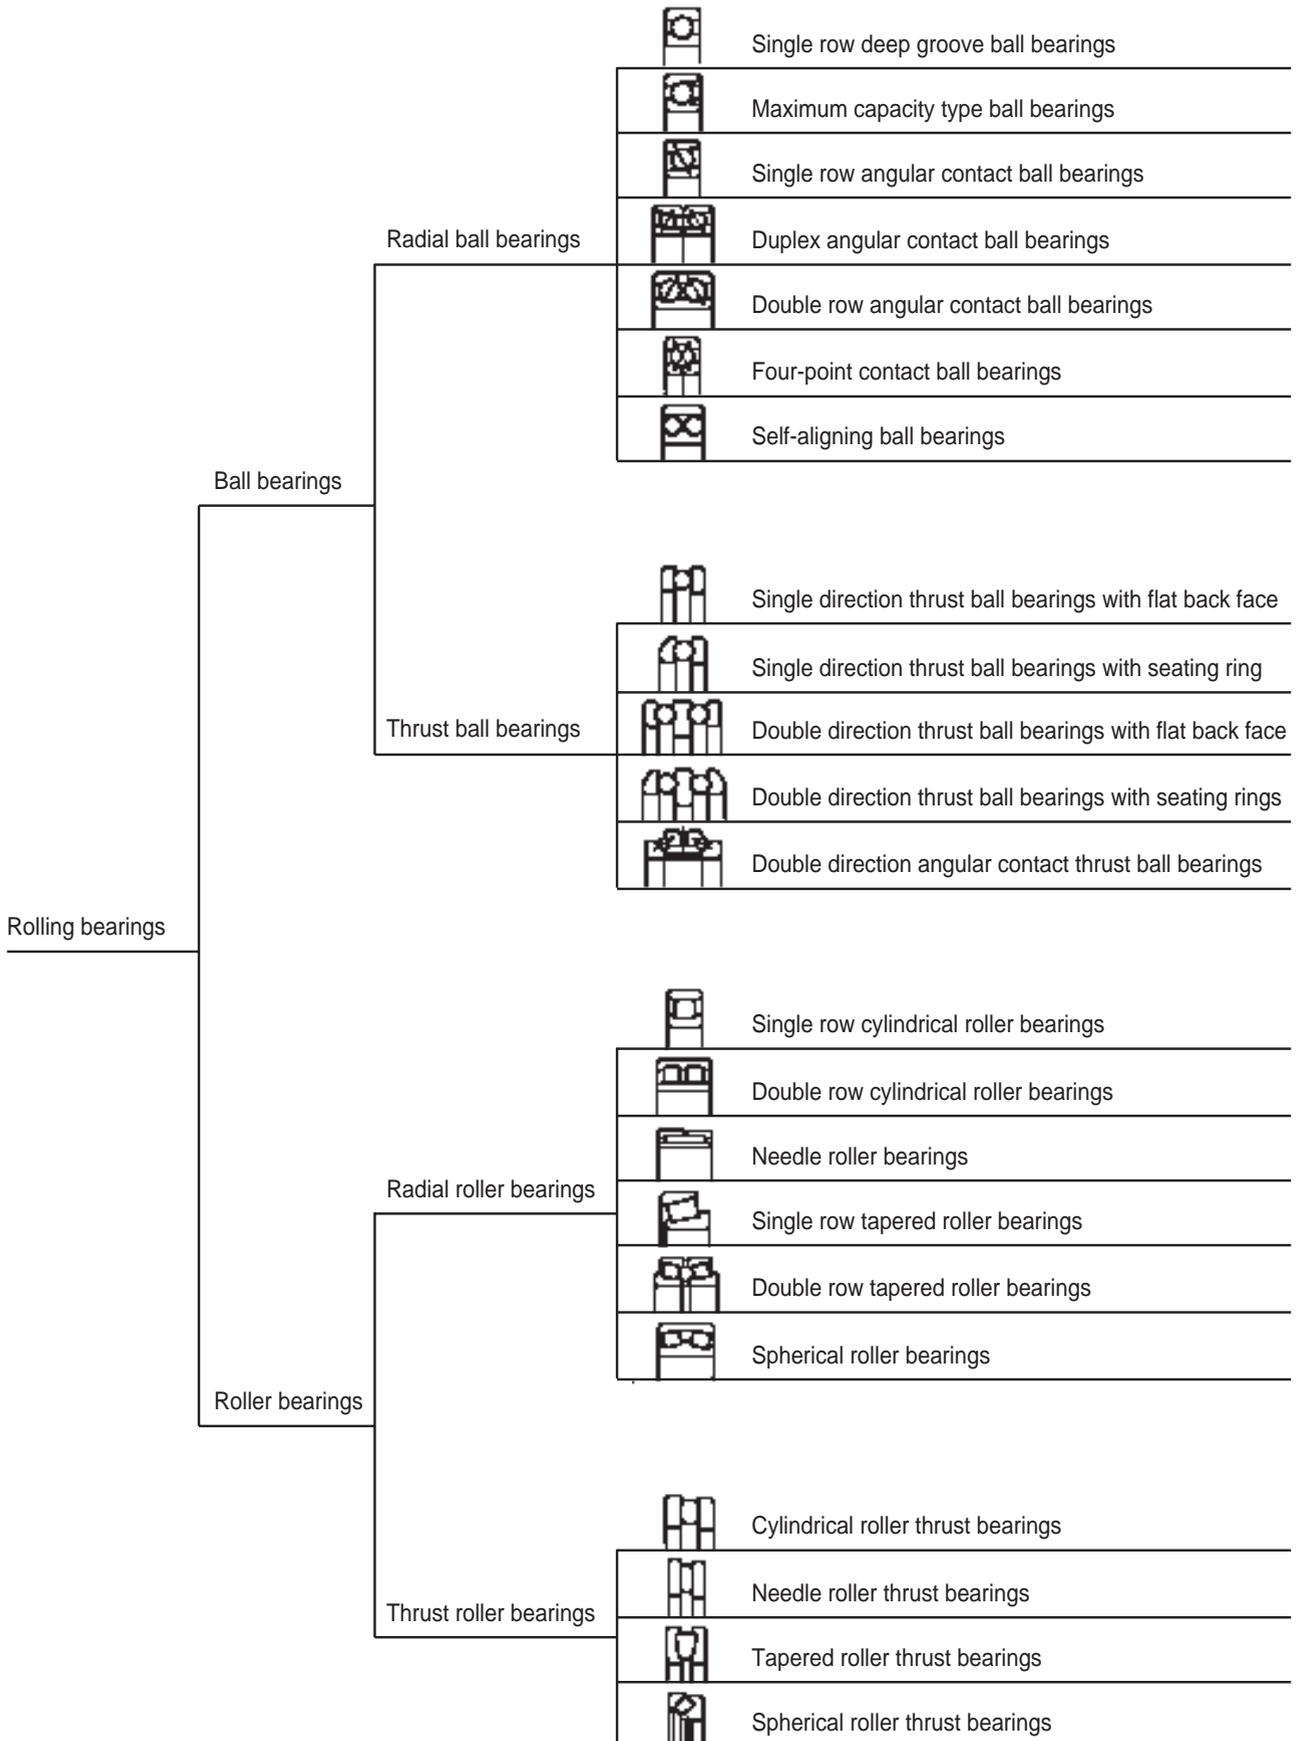

CLASSIFICATION OF ANTI-FRICTION BEARINGS

Most rolling bearings consist of bearing rings (an inner ring and an outer ring), rolling elements and a rolling element retainer (cage). The retainer separates the rolling elements at regular intervals, holds them in place within the inner and outer raceways, and allows them to rotate freely.

Rolling bearings fall into two main classifications: ball bearings and roller bearings. Balls geometrically contact the raceway surfaces of the inner and outer rings at “points,” while the contact surface of rollers is a “line” contact. Rollers come in four basic geometric styles: cylindrical, needle,

tapered and spherical. Rolling bearings can further be classified according to the direction in which the load is applied: radial, thrust, or a combination of both.

While the rolling elements and the bearing rings take any load applied to the bearings (at the contact point between the rolling elements and raceway surfaces), the retainer takes no direct load. It only serves to hold the rolling elements at equal distances from each other, forcing the rolling elements to enter the load zones and prevent them from falling out.

DESIGN AND CHARACTERISTICS OF BALL AND ROLLER BEARINGS

SINGLE ROW RADIAL BALL BEARINGS are the most widely used bearings and utilize an uninterrupted raceway, which makes these bearings suitable for radial loads, or a combination of thrust and radial loads. This design permits precision tolerances even at high speed operation.

The cage in this bearing is pressed steel. For high speed bearings, machined brass cages are available. Bearings with locating snap rings are also available.

PRELUBRICATED BEARINGS have integral seals, or shields, which are packed with long-life grease. In many applications, these bearings may be used without supplementary seals, closures, or protective devices. This design offers the lowest possible manufacturing cost to the consumer.

The boundary dimension of this type is the same as the corresponding bearings without the seals or shields.

SHIELDED BALL BEARINGS are protected on one, or both sides (suffixes Z and ZZ, respectively) by metal shields fastened to the outer ring. This close clearance labyrinth seal retains the lubricant and prevents the entrance of foreign matter.

SEALED BALL BEARINGS incorporate steel reinforced rubber seals securely fastened to a groove on the outer ring. Contact with the inner ring is by sealing lip (Contact Suffix LLU). Or, non-contact with the inner ring is by labyrinth seal (Non-contact Suffix LLB) to provide positive sealing at all times.

SINGLE ROW ANGULAR CONTACT BALL BEARINGS feature raceways with high and low shoulders. These opposing raceways are designed to carry thrust load in one direction.

These bearings may be preloaded at the factory so that the correct preload will develop within the bearing.

The bearings in this series are assembled with a specific internal clearance so that they will have a speci-

fied contact angle under load. The standard contact load used by NTN is 30°; bearings made to a 40° contact angle carry the suffix B.

For high speed grinding spindles, the 7000C, 7200C and the 7300C series are available. They are high accuracy bearings with a 15° contact angle, and phenolic resin cages for high speed operations.

DOUBLE ROW ANGULAR CONTACT BALL BEARINGS have an inner and outer ring with a double raceway.

The two rows are so related that the contact angle is similar to a pair of back-to-back single row bearings. The 5200 and 5300 series offer continuous races and can carry thrust loads in either direction. Since the 3200 and 3300 series have filling slots, it is necessary to mount them with the thrust load acting against the unnotched face of the rings.

DOUBLE ROW SELF-ALIGNING BEARINGS utilize an inner ring with two rows of balls in two deep raceways, and an outer ring with a single spherical raceway. In this way, the inner and outer rings can be misaligned relative to each other. The resulting effect is a comparatively large angle imposing moment loads upon the balls.

The boundary dimensions of the 1200 and 1300 series are the same as the 6200 and 6300 single row deep groove bearings.

CYLINDRICAL ROLLER BEARINGS have rollers which are essentially cylindrical in shape. This provides a modified line contact with the cylindrical inner and outer ring raceways, while the rollers are guided by ground ribs on either the inner or outer ring.

The cylindrical shape allows the inner ring to have axial movement relative to the outer ring (except the NH type). This is especially important when accommodating thermal expansion when both rings must be press fitted.

In this series, the NJ, NF and NH types can carry light or intermittent thrust loads.

The NN3000 and NN3000K series are available in high precision tolerances and are well suited for use in machine tool spindles.

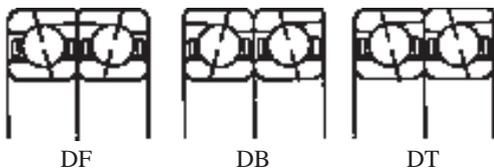

TAPERED ROLLER BEARINGS utilize conical rollers and raceways arranged so that the rollers and raceways meet at a common apex. The rollers are guided by contact between the large end of the roller and a rib on the inner ring. This provides high capacity for radial and single thrust loads.

SPHERICAL ROLLER BEARINGS have two rows of rollers in separate raceways which allows the bearing to compensate for angular thrust errors. They have large radial and thrust load capacity for heavy shock and impact loads, making them suitable for heavy industrial equipment.

DUPLEX BEARINGS use a set of two on a common shaft with the inner and outer rings clamped solidly together. They are used to gain axial shaft control, rigidity and extra capacity.

There are three fundamental combinations in duplex bearings: face-to-face (DF), back-to-back (DB), and tandem (DT).

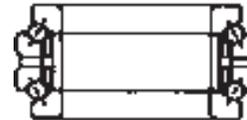

SINGLE DIRECTION THRUST BEARINGS consist of two washers having ball grooves ground into their adjacent faces with balls and cages mounted between these grooves. They are normally equipped with either pressed or machined cages and are suitable for carrying thrust loads at moderate speeds.

DOUBLE DIRECTION ANGULAR CONTACT THRUST BALL BEARINGS are back-to-back duplex bearings with a larger contact angle than that of normal angular contact ball bearings.

These bearings are primarily designed as thrust bearings for machine tools. They utilize machined brass cages.

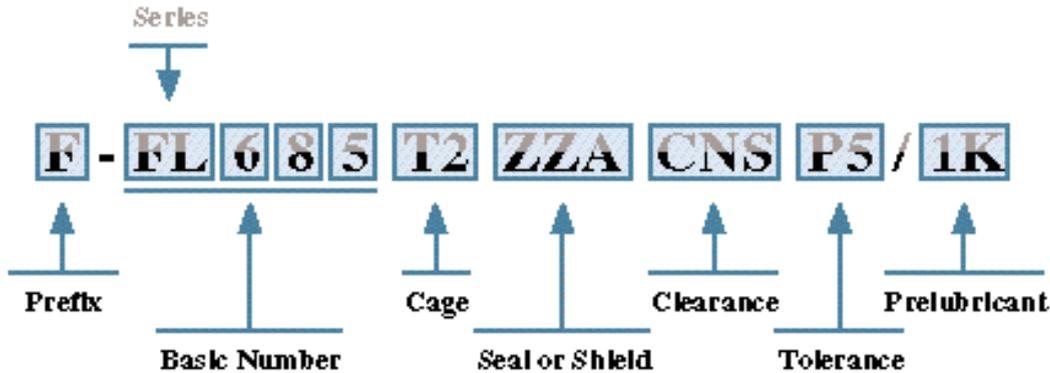

SPHERICAL ROLLER THRUST BEARINGS are similar to double row spherical roller bearings, but have a greater contact angle. They are guided by ground flanges on the inner ring and operate against the spherical raceway in the outer ring. The contact angle is approximately 45°. Machined cages are normally used, and oil lubrication is recommended.

1. PREFIX

No Symbol: High carbon chrome bearing steel (equivalent to AISI E52100)
 F: Martensitic stainless steel (equivalent to AISI 440C)
 N: Beryllium copper

2. SERIES

67, 68: Metric series
 69, 60: Metric series
 62, 63: Metric series
 R: Inch series
 W: Wider than standard width (sealed type)
 WA: Non-standard sizes
 RA: Wider than standard width of inch series (open and sealed types)
 FL: Flanged outer ring
 FLA: Flanged outer ring, provided non-standard flange dimensions

3. CAGE

No Symbol: Pressed steel cage
 J1: Pressed stainless steel cage
 T1: Phenolic resin cage
 T2: Nylon cage
 T3: Rulon machined cage
 V: Cageless type

4. SEAL OR SHIELD

No symbol: Open Type
 Z, ZZ: Steel shield(s)
 ZA, ZZA: Removable steel shield(s)
 ZA1, ZZA1: Removable stainless steel shield(s)
 Z1, ZZ1: Stainless steel shield(s)
 LB, LLB: Non-contact type rubber seal(s)
 LF, LLF: Non-contact rubber seal(s)
 LU, LLU: Contact type rubber seal(s)
 SA, SSA: Non-contact nylon seal(s)

5. INTERNAL CLEARANCE

No Symbol: Normal clearance
 C2: Clearance less than normal
 C3: Clearance greater than normal
 C4: Clearance greater than C3
 C2S: Low group of C2 clearance
 CNS: Low group of normal clearance
 CNM: Medium group of normal clearance
 CNL: High group of normal clearance
 C3S: Low group of C3 clearance
 C3M: Medium group of C3 clearance
 C3L: High group of C3

6. TOLERANCE

No Symbol: ISO class 0 (equivalent to ABEC 1)
 P6: ISO class 6 (equivalent to ABEC 3)
 P5: ISO class 5 (equivalent to ABEC 5)
 P4: ISO class 4 (equivalent to ABEC 7)
 P2: ISO class 2 (equivalent to ABEC 9)
 P5A: ISO class 5A
 P4A: ISO class 4A
 PS5: NTN PS class 5
 PS4: NTN PS class 4
 PX1: Special tolerance

① Bore and Outer Diameter (O.D.) are the same as for RW and FLRW in the upper table.

Bearing numbers listed above are for bearings made of high carbon chrome bearing steel; bearings made of stainless steel (equivalent to AISI 440 C) are also available upon request, for which "F" should be prefixed to the bearing numbers.

Bearing numbers listed above are for bearings made of high carbon chrome bearing steel; bearings made of stainless steel (equivalent to AISI 440 C) are also available upon request, for which "F" should be prefixed to the bearing numbers.

SEAL STRUCTURE AND TYPE DESIGNATION	FEATURES
  Z ZZ	<ul style="list-style-type: none"> The sealed V-slot around the inner ring creates an air and/or grease pocket which increases the labyrinth effect. This is a non-contact, low-friction torque type bearing assembly, which can be used effectively for general protection.
  LB LLB	<ul style="list-style-type: none"> Both sides of the seal edge have a circular concaved surface which creates several narrow-wide gaps along the V-shaped groove of the inner ring's sealed surface. The unique design ensures a perfect labyrinth effect. This non-contact, low friction bearing assembly requires very little torque and is highly resistant to dust build-up.
  LU LLU	<ul style="list-style-type: none"> The seal edge forms a double-lip. The inner lip touches the V-slot side of the inner ring's seal surface. There is a slight gap between the inner ring and the outer lip which produces the labyrinth effect. Even if friction causes the inner lip to wear, the outer lip constricts around the inner ring to compensate, and thus constantly preserving the perfect sealing effect. Due to the fact that it is a contact type seal bearing, the torque will be a little greater but the seal will provide the optimum protection from dust penetration.

1. PREFIX

- TS2: Heat stabilization for up to 320° F (160° C)
- TS3: Heat stabilization for up to 390° F (200° C)
- TS4: Heat stabilization for up to 480° F (250° C)

2. TYPE

- 6: Single row deep groove ball bearings
- 8, WC8: Single row deep groove ball bearings
- BL: Maximum capacity
- DE & DF: Special double row ball bearings
- SC & SX: Special single row ball bearings
- R: Inch series

3. INTERNAL DESIGN

- A: Internal redesign, from A onward
- U: Universal seal groove for open bearings

4. CHAMFER

- Xn: Special chamfer, from 1 onward (X1, X2 . . .)

5. CAGE

- No Symbol: Pressed steel cage
- J: Pressed steel cage
- T1: Phenolic cage
- T2: Nylon cage

6. SEAL OR SHIELD

- No Symbol: Open Type
- LB, LLB: Non-contact rubber seal
- LU, LLU: Double-lip contact rubber seal
- LH, LLH: Light contact rubber seal
- LUA, LLUA: Polyacrylic rubber seal
- LUA1, LLUA1: Fluorocarbon rubber seal
- Z, ZZ: Shield
- Z1, ZZ1: Stainless steel shield
- ZA, ZZA: Removable shield

7. RING MODIFICATION

- N: Snap ring groove on outer ring, but without snap ring
- NR: Snap ring groove on outer ring, snap ring included
- /X.XX: Special bore, XX.XX in mm; Ex. 5/16" bore, /7.938
- /XX.X: Special O.D., size XX.X in mm

8. INTERNAL CLEARANCE

- C1: Radial clearance less than C2
- C2: Radial clearance less than normal
- C3: Radial clearance greater than normal
- C4: Radial clearance greater than C3
- C5: Radial clearance greater than C4
- CSXX: Special radial clearance; XX is mean value in 0.001 mm units

9. TOLERANCE

- P6: ISO class 6 (equivalent to ABEC 3)
- P5: ISO class 5 (equivalent to ABEC 5)
- P4: ISO class 4 (equivalent to ABEC 7)
- PXn: Special tolerance, from 1 onward (PX1, PX2 . . .)
- Vn: Special requirement, from 1 onward (V1, V2 . . .)

10. PRELUBRICANT (Typical)

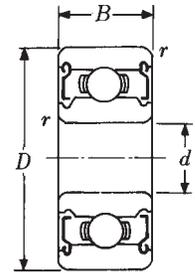

- /1E: Exxon Andok C grease
- /1W: Anderson Oil Winsor Lube L-245X, MIL-L-6085A
- /2A: Shell Alvania #2 grease, MIL-G-18709A
- /2E: Exxon Unirex N3
- /3A: Shell Oil Alvania #3 grease
- /3E: Exxon Beacon 325 grease
- /5C: Chevron SRI #2 grease, MIL-G-3545C
- /5S: Shell Aeroshell #7 grease, MIL-G-23827A
- /9B: Mobil 28, MIL-G-81322
- /LO14: Shell Dolium R

1. PREFIX

TS2:	Heat stabilization for up to 320°F (160°C)
TS3:	Heat stabilization for up to 390°F (200°C)
TS4:	Heat stabilization for up to 480°F (250°C)
BNT:	High speed angular contact ball bearings
HSB:	High speed angular contact ball bearings
SF:	Special single row angular contact ball bearings
DE & DF:	Special double row angular contact ball bearings

2. TYPE

3:	Double row angular contact ball bearings with filling slot
5:	Double row angular contact ball bearings without filling slot
7:	Angular contact ball bearings

3. CONTACT ANGLE

No Symbol:	Contact Angle 30°
B:	Contact angle 40°
C:	Contact angle 15°

4. CHAMFER

Xn:	Special chamfer, from 1 onward (X1, X2 . . .)
-----	-----------------------------------------------

5. CAGE

No Symbol:	Standard cage
J:	Pressed steel cage
L1:	Machined brass cage
T1:	Phenolic cage
T2:	Plastic cage, nylon or teflon

6. DUPLEX ARRANGEMENT

DB:	Duplex pair, back to back mounting
DF:	Duplex pair, face to face mounting
DT:	Duplex pair, tandem mounting
G:	Single bearings, flush ground universal mount for DB, DF and DT arrangement
GD2:	Pair of universally mountable bearings
+A:	Spacer (A is nominal width of spacer in mm)

7. PRELOAD

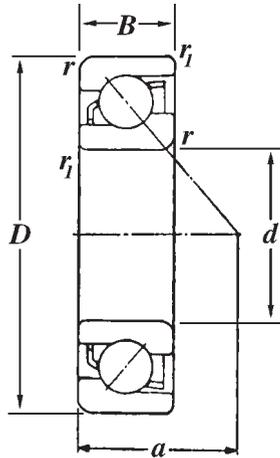

GL:	Light preload
GN:	Normal preload
GM:	Medium preload
GH:	Heavy preload
Gn:	Special preload

8. TOLERANCE

P6:	ISO class 6 (equivalent to ABEC 3)
P5:	ISO class 5 (equivalent to ABEC 5)
P4:	ISO class 4 (equivalent to ABEC 7)

Units: INCHES
Millimeters

Note: Suffixes A, B and C denote internal design change to accommodate seal.

1. TYPE

- 1: Standard for self-aligning ball bearings
- 2: Standard for self-aligning ball bearings

2. CAGE

- No Symbol: Standard cage
- J: Pressed steel cage
- T2: Plastic cage, nylon or teflon
- L1: Machined brass cage

3. RING MODIFICATION

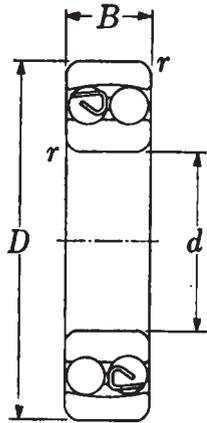

- K: 1:12 tapered bore

4. INTERNAL CLEARANCE

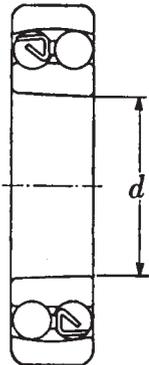

- C1: Radial clearance less than C2
- C2: Radial clearance less than normal
- C3: Radial clearance greater than normal
- C4: Radial clearance greater than C3
- C5: Radial clearance greater than C4
- CSXX: Special radial clearance;
XX is mean value in 0.001 mm units

① B_1 is the combined width of the balls. Note that for bearings No. 1318(K) - 1322(K), the balls project beyond the ring face ($B_1 > B$).

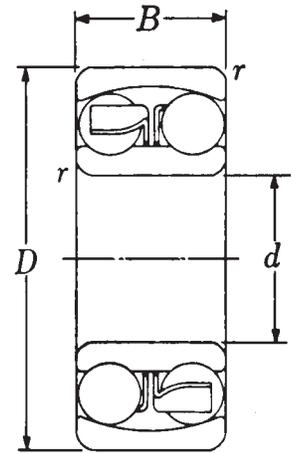

The d dimension for the tapered bore is measured from the side of the bearing with the smallest bore dimension.

Cylindrical Bore
23

Tapered Bore
23K
Taper 1:12

The *d* dimension for the tapered bore is measured from the side of the bearing with the smallest bore dimension.

1. TYPE

- N: Straight outer ring with inner ring and roller assembly
- NU: Straight inner ring with outer ring and roller assembly
- NF: One lip outer ring with inner ring and roller assembly
- NJ: One lip inner ring with outer ring and roller assembly
- NH: NJ series bearing with HJ thrust collar (NJ+HJ=NH)
- NN: Double row precision cylindrical bearings
- HJ: Separate thrust collar
- R, RN, RNU: Special cylindrical roller bearings

2. SERIES

- 10: Standard series cylindrical roller bearings
- 2: Standard series cylindrical roller bearings
- 22: Standard series cylindrical roller bearings
- 23: Standard series cylindrical roller bearings
- 3: Standard series cylindrical roller bearings
- 4: Standard series cylindrical roller bearings

3. INTERNAL DESIGN

- E: High capacity cylindrical roller bearings

4. CHAMFER

- Xn: Special chamfer, from 1 onward (X1, X2 . . .)

5. CAGE

- F1: Machined steel cage
- J: Pressed steel cage
- G1: Machined brass cage
- T2: Nylon cage

6. INTERNAL CLEARANCE

- C1: Radial clearance less than C2
- C2: Radial clearance less than normal
- No Suffix: Normal Radial Clearance
- C3: Radial clearance greater than normal
- C4: Radial clearance greater than C3
- C5: Radial clearance greater than C4
- CSXX: Special radial clearance; XX is mean value in 0.001 mm units (μm)
- NA: Radial clearance of cylindrical roller bearings with non-interchangeable components

7. TOLERANCE

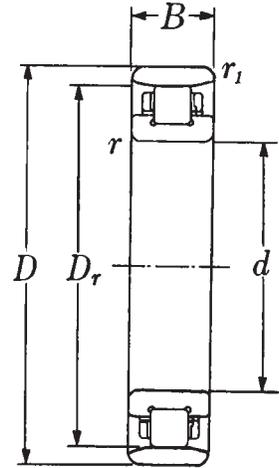

- Normal: ISO class 0
- P6: ISO class 6 (equivalent to RBEC 3)
- P5: ISO class 5 (equivalent to RBEC 5)
- P4: ISO class 4 (equivalent to RBEC 7)

Note: The *d* dimension for the tapered bore is measured from the side of the bearing with the smallest bore dimension.

ISO Series

1. PREFIX

ET:	NTN Endurance tapered roller bearings, case hardened material
4T:	NTN 4-Top tapered roller bearings, case hardened material
E:	Case hardened steel
T:	Internationally interchangeable dimensions

2. SERIES

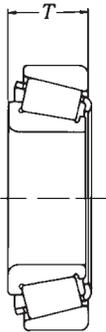

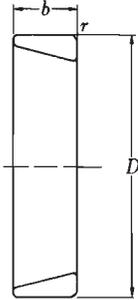

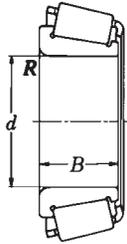

H:	Heavy
HH:	Heavier than heavy
HM:	Heavy-medium
L:	Light
LM:	Light medium
M:	Medium
ISO:	Metric series 320X, 302, 322, 303 and 323

3. SUFFIX

A:	Different bore, O.D., width or radius from basic part number
PK:	Class K for J-Line
PXn:	Special tolerance, n; from 1 onward
S:	Different bore, OD, width or radius from basic part number
U:	ISO series; internationally interchangeable through hardened steel
W:	Slot or keyway
X:	Different bore, O.D., width or radius from basic part number
-0:	AFBMA class 0
-00:	AFBMA class 00
-2:	AFBMA class 2
-3:	AFBMA class 3
-4:	AFBMA class 4

* A - Retaining Ring (TKB1001)

1. PREFIX

- TS2: Heat stabilization for up to 320° F (160° C)
- TS3: Heat stabilization for up to 390° F (200° C)
- TS4: Heat stabilization for up to 480° F (250° C)

2. SERIES

- 21: Standard series spherical roller bearings
- 22: Standard series spherical roller bearings
- 23: Standard series spherical roller bearings
- 24: Standard series spherical roller bearings

3. INTERNAL DESIGN

- B: One piece ribbed inner ring, asymmetrical rollers and center guided retainer
- C: Plain inner ring, center floating guide ring (smaller size bearings)
- UA: Inner ring without center guide, asymmetrical rollers, and outer ring center-guided retainer (limited thrust capabilities)
- E: High capacity spherical roller bearings

4. CAGE

- No Symbol: Standard cage
- J: Pressed steel cage
- L1: Machined brass cage
- T2: Nylon cage

5. RING MODIFICATION

- D1: Oil groove and holes
- K: 1:12 tapered bore

6. INTERNAL CLEARANCE

- C1: Radial clearance less than C2
- C2: Radial clearance less than normal
- No Suffix: Normal internal clearance
- C3: Radial clearance greater than normal
- C4: Radial clearance greater than C3
- C5: Radial clearance greater than C4
- CSXX: Special radial clearance; XX is mean value in 0.001 mm units

7. TOLERANCE

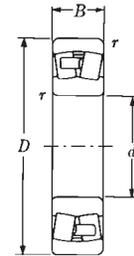

- No Symbol: Class 0 (equivalent to ABEC 1); standard
- PX1: Special tolerance, from 1 onward
- V: Special requirement, from 1 onward
- VS1: Special tolerance for shaker screen bearings (C3 clearance)
- VS2: Special tolerance for shaker screen bearings (C4 clearance)

① The suffix D1 means the bearing has lubrication holes and an oil groove. However, for bearing numbers 22236B(K) and over, the suffix D1 is not needed as the lubrication holes and oil groove are standard.

② For bearings with a blank G dimension, no lubrication holes and oil groove are provided. These features may be added upon request. (Add suffix D1.)

Note: 'E' type features higher load capacity and high temp. resin cages (40° C to 150° C); EP oil additives could effect cage material.

Note: The *d* dimension for the tapered bore is measured from the side of the bearing with the smallest bore dimension.

❶ The suffix D1 means the bearing has lubrication holes and an oil groove. However, for bearing numbers 23044B(K) and over, the suffix D1 is not needed as the lubrication holes and the oil groove are standard.

Note: The *d* dimension for the tapered bore is measured from the side of the bearing with the smallest bore dimension.

In this series, machined brass cages are also available. When placing an order for them, put the suffix L1 on the bearing number.

Example: 23124BL1D1

Cylindrical Bore
231

Tapered Bore
231K
Taper 1:12

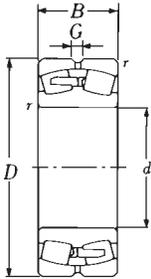

❶ The suffix D1 means the bearing has lubrication holes and an oil groove. However, for bearing numbers 23138B(K) and over, the suffix D1 is not needed as the lubrication holes and oil groove are standard.

Note: The *d* dimension for the tapered bore is measured from the side of the bearing with the smallest bore dimension.

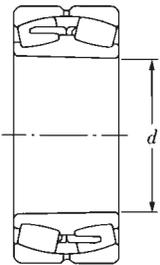

Units: INCHES
Millimeters

Use Suffix L1 for brass cages.
Example: 23218BL1

Cylindrical Bore
232

Tapered Bore
232K
Taper 1:12

Bearing numbers 24144B(K30) and under have machined brass cages. Machined brass cages are also available for bearing numbers 24148B(K30) and over. When placing an order for them, put the suffix L1 on the bearing number.

Example: 24148BL1

Cylindrical Bore
241

Tapered Bore
241K30
Taper 1:30

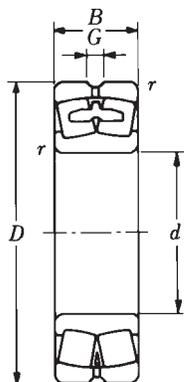

❶ The suffix D1 means the bearing has lubrication holes and an oil groove. However, for bearing numbers 24138B(K30) and over, the suffix D1 is not needed as the lubrication holes and oil groove are standard.

Note: The *d* dimension for the tapered bore is measured from the side of the bearing with the smallest bore dimension.

Units: **INCHES**
Millimeters

The cage is made of machined brass.

223

❶ The suffix VS1 means the bearing has controlled O.D., bore and radial clearance for shaker screen application.

Note: Lubrication holes and oil groove provided as standard; suffix D1 not needed.

1. SERIES & SIZE

- 51, 53*: Single direction thrust ball bearing
- 52, 54*: Double direction thrust ball bearing
- 56: Angular contact thrust ball bearing
- 29: Spherical thrust roller bearing
- 29: Single direction thrust ball bearing
- 9: Single direction thrust ball bearing

2. CAGE

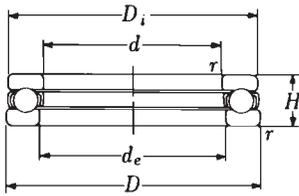

- No Symbol: Standard cage
- J: Pressed steel cage
- L1: Machined brass cage
- T2: Plastic cage, nylon or teflon

* Self-aligning outside diameter

Inch Series

1. BEARING INSERTS*

AEL:	Narrow inner ring, locking collar
AR:	Narrow inner ring, set screw type
AS:	Narrow inner ring, set screw type
JEL:	Narrow inner ring, locking collar
REL:	Wide inner ring, locking collar
UR:	Wide inner ring, set screw type
UC:	Wide inner ring, set screw type, with flinger
UEL:	Wide inner ring, locking collar, with flinger
UK:	Tapered bore, with flinger

HP:	Pillow Block, cast housing, high center height
P:	Pillow Block, cast housing
PL:	Pillow Block, cast housing, low center height
PP:	Pillow Block, pressed steel housing
RPP:	Pillow Block, pressed steel housing with rubber ring
UP:	Pillow Block, cast housing
C:	Cylindrical cartridge unit
HB:	Hanger unit, cast housing
PT:	Mini stretcher
T:	Take-up unit, cast housing

2. HOUSINGS

F:	Flanged unit, cast housing
FA:	Flanged unit, cast housing
FC:	Flanged piloted unit, cast housing
FD:	Flanged unit, cast housing
FH:	Flanged unit, cast housing
FL:	Flanged unit, cast housing
FS:	Flanged piloted unit, cast housing
FU:	Flanged unit, cast housing
PF:	Flanged unit, pressed steel housing
PFL:	Flanged unit, pressed steel housing
RPF:	Flanged unit, pressed steel housing with rubber ring

3. SIZE

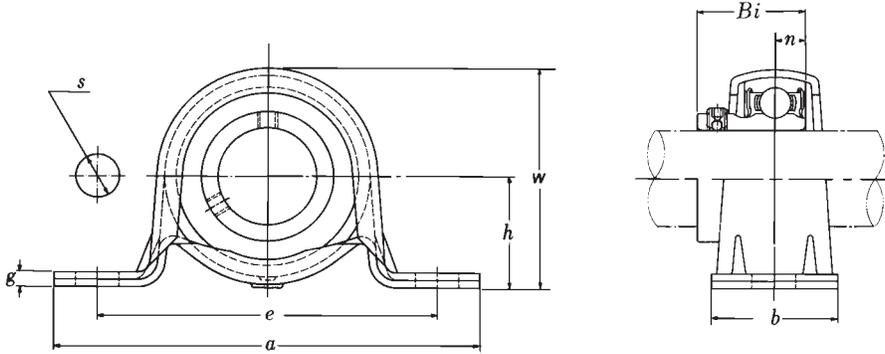

2:	Light
X:	Medium
3:	Heavy

4. SUFFIX

D1:	Relube type
T:	Relube type

* To order a bearing with a cylindrical O.D., add S to the part number (example: JELS).

HOW TO ORDER

Example: When you order one SAF22520, you will receive a package containing one SAF520 Pillow Block Housing, one No. 22220BKD1 Bearing and one SNW20 Adapter. All units are supplied with two Triple Seal Rings and a Stabilizing Ring. If you specify SAF22520M3, the required end cover will be included. Always specify shaft size. The same example applies when you order SAF22620.

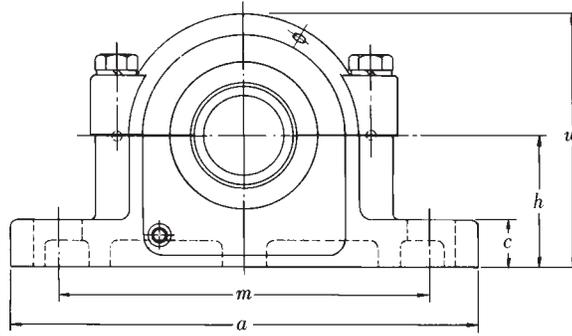

- ① A pillow block housing number includes one housing and two triple seal rings automatically. Suffix G on a pillow block housing number means one stabilizing ring is also included.

NOTE: For cast steel pillow blocks in 22500(22200) Series (SAFS), see pages 150 and 151.

HOW TO ORDER

Example: When you order one SAF22220, you will receive a package containing one SAF220 Pillow Block Housing, one No. 22220BD1 Bearing, one No. AN20A Locknut and one No. W20 Lockwasher. All units are supplied with two Triple Seal Rings and a Stabilizing Ring. If you specify SAF22220M3, the required end cover will be included. Always specify shaft size. The same example applies when you order SAF22320.

- ① A pillow block housing number includes one housing and two triple seal rings automatically. Suffix G on a pillow block housing number means one stabilizing ring is also included.

SAFS 222

HOW TO ORDER

Example No. 1: When you order one SAFS22520, you will receive a package containing one SAFS520 Pillow Block Housing, one No. 22220BKD1 Bearing and one SNW20 Adapter.

Example No. 2: When you order one SAFS22220, you will receive a package containing one SAFS220 Pillow Block Housing, one No. 22220BD1 Bearing, one No. AN20A Locknut and one No. W20 Lockwasher.

For both of the above examples:

All units are supplied with two Triple Seal Rings and a Stabilizing Ring. If you specify SAFS22520M3, the required end cover will be included. Always specify shaft size.

- ① A pillow block housing number includes one housing and two triple seal rings automatically. Suffix G on a pillow block housing number means one stabilizing ring is also included.

NTN Bearings

**TECHNICAL
INFORMATION**

TECHNICAL INFORMATION

Bearing Materials

The reliability and high capacity of NTN ball and roller bearings is the result of developments in metallurgy, manufacturing techniques, and our strict methods of quality control.

Contact surfaces of the bearing rings and rolling elements are subjected to repeated heavy stresses, yet must be able to maintain high precision and rotational accuracy. To accomplish this, the rings and rolling elements must be made of material that has high hardness, is resistant to rolling fatigue, is wear resistant and has good dimensional stability.

High carbon chromium bearing steel, which can be deep hardened, and case hardened steel with a hardened carburized outer layer are used for the rings and rolling elements of standard bearings. Case hardened steels have excellent shock resistance properties and are often used where impact loads are present.

The most common cause of fatigue cracking in bearings is the inclusion of non-metallic impurities in the bearing material. By using clean materials, the rolling fatigue life of the bearing is lengthened. For all its bearings, NTN uses steel of the highest cleanliness, and refined by a vacuum degassing process.

Bearing cage materials must have the strength to withstand rotational vibrations and shock loads. These materials must also have a low friction coefficient, be light weight, and be able to withstand bearing operating temperatures. Common cage materials are low carbon steel, bronze/brass alloy, or injection molded plastic. For additional information, please contact your NTN representative.

Handling & Installation

Improper handling practices prior to and during installation can easily damage the performance and precision built into NTN ball and roller bearings. It is necessary that certain precautions are taken to prevent such damage.

The most important factor to keep in mind when handling bearings is cleanliness. NTN bearings are assembled under immaculate conditions, then carefully packaged for protection against contamination and oxidation. A strong effort should be made to keep the bearings in this condition prior to final assembly. The bearing package should remain closed until ready for immediate installation. If it is necessary to unwrap bearings before that, they should be placed in a clean, dry area. Do not stack unpackaged bearings.

Bearings should be installed in an area where a clean atmosphere exists. Dirty conditions in the bearing installation area can easily lead to contamination and a premature failure. In addition, assembly benches and tools must be kept clean to prevent contaminants such as dust, grit and steel chips from entering the bearing. It is much easier to keep a bearing clean than it is to wash it clean enough for service.

The shaft, housing and other machine elements should be cleaned and inspected prior to bearing installation. The bearing mounting must be properly designed from a functional standpoint, and must have correct shaft and housing fits and shoulder heights. The design should be such that the bearings can be installed as easily as possible.

Proper assembly procedures and tools such as arbor presses, pullers, and sleeves will not only facilitate assembly, but will also avoid damage to the bearings. When a bearing is pressed on a shaft, the inner ring must be started squarely. A “cocked” ring may score the shaft and damage the bearing. The pressure must be applied directly on the ring being mounted. The bearing must not be tapped in place with direct blows on the bearing ring. The preferred practice is to place a sleeve between the bearing ring and the hammer and to tap the sleeve lightly all around. (illustration A)

Sometimes a larger size bearing must be heated so that it can be more easily assembled on a shaft. A convenient method of doing this is to insert a heat source

such as a light bulb in the bore of the bearing, avoiding direct contact until the inner ring has expanded sufficiently. Another method is to heat the bearing in a bath of hot oil. The oil must be clean, and the temperature should not exceed 250° F. Higher temperatures may cause the oil to decompose and the bearing to lose its proper hardness.

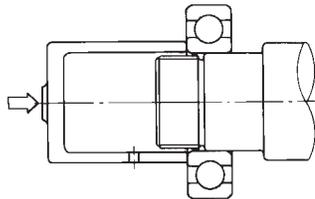

Fig. 15.1 Press mounting of inner ring

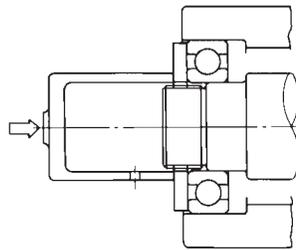

Fig. 15.2 Press mounting of inner and outer rings simultaneously

Illustration A

Running Test

After mounting, a running test should be performed to ensure that the bearing has been properly installed. The shaft or housing is first rotated by hand. If no problems are observed, a low speed, no load power test is performed. If no abnormalities are detected at this point, the load and speed are gradually increased to operating conditions. If any unusual noise, vibration or temperature rise is observed during the test, the procedure should be stopped and the installation examined.

Under normal conditions, bearing temperature rises with rotation and then reaches a stable operating temperature. If the temperature continues to rise and does not level off, or if there is a sudden temperature rise, or if the temperature is unusually high, the bearing should be inspected.

Dismounting

Bearings are often removed as part of periodic inspection procedures, or during the replacement of other parts. The shaft and housing are almost always reinstalled, and the bearings themselves are often reused. Because of this, the same guidelines for cleanliness in mounting apply to dismounting. (illustration B)

TECHNICAL INFORMATION

Lubrication

Bearing lubricants are of two basic types: oil or grease. The purpose of bearing lubrication is to prevent direct metal to metal contact between the various rolling and sliding elements. This is accomplished through the formation of a thin film on the contact surfaces, and is necessary for the following reasons:

- Friction and wear reduction
- Dissipation of heat generated within the bearing
- Prolonged bearing life
- Prevention of rust
- Protection from foreign material entering bearing

Grease lubricants are composed of either a mineral oil base or a synthetic oil base combined with a thicken-

ing agent. Grease type lubricants are relatively easy to handle, and require only the simplest sealing devices. A suitable grease should remain mechanically and chemically stable at operating temperature. It should not thicken, harden, separate, or become acid or alkaline to any marked degree.

Oil consists of either petroleum fluids refined from crude oil or synthetic fluids produced by chemical synthesis. Generally, oil lubrication is better suited for high speed and high temperature applications than grease lubrication. Oil lubrication is especially effective for those applications requiring the bearing generated heat (or heat applied to the bearing from other sources) to be dissipated. For additional lubrication information, please contact your NTN representative.

COMMON GREASE CODES AND NAMES

NTN Code	Brand	Military Specs.	Temp. Range	Thickener	Oil
2A	Shell Alvania 2	MIL-G-18709A	-30° F to +230° F	Lithium	Petroleum
9B	Mobil 28	MIL-G-81322	-80° F to +350° F	Synthetic	Synthetic
5C	Chevron SRI-2	MIL-G-3545C	-20° F to +350° F	Polyurea	Petroleum
1D	LX40 (DuPont Krytox 240AB)	MIL-G-38220	-40° F to +450° F	Fluorotelomer	Fluorotelomer
1E	Exxon Andok C	—	-30° F to +250° F	Sodium	Petroleum
3E	Exxon Beacon 325	MIL-G-3278A	-60° F to +250° F	Lithium	Diester
4E	Exxon Andok 260	MIL-G-3545	-20° F to +275° F	Sodium	Petroleum
4M	Dow-Corning DC 44M	MIL-G-15719A	-40° F to +400° F	Lithium	Silicone
5S	Shell Aero Shell 7	MIL-G-23827A	-100° F to +250° F	Microgel	Diester
3W	Texaco Regal AFB 2	MIL-G-24139	-30° F to +230° F	Lithium	Petroleum

ANALYSIS OF BEARING OPERATING PROBLEMS

The following table lists some common types of bearing operating problems, probable causes, and suggested corrective measures. If these suggestions do not correct the trouble, call your **NTN** Representative for assistance.

TECHNICAL INFORMATION

Trouble	Observed Characteristic	Probable Cause	Corrective Action
NOISE	High pitch, steady tone	Excessive axial load	Correct outer ring fit in housing and/or shoulder location to allow thermal expansion.
		Excessive radial load	Use correct fit of inner ring on shaft. For radial bearings, use bearing with greater internal clearance. For pre-loaded paired bearings, use lighter preload.
		Misalignment	Correct alignment.
	Low pitch, continuous or intermittent	Too much clearance in bearing	Use correct shaft fit. For radial bearings, use bearing with less internal clearance. For preloaded paired bearings, use heavier preload.
		Bearing brinelled	Replace bearing, avoid brinelling.
		Raceways pitted due to dirt	Wash all parts, replace with new bearing, use clean lubricant, improve seals.
		Resonant vibration of machine structure	Stiffen or sound-deaden thin panels and large flat surfaces.
	Intermittent squeal or high pitch noise	Balls skidding	Provide thrust preload spring. Use thinner grease. For radial bearings, use bearing with less internal clearance. For preloaded paired bearings, check for correct preload.
		Shaft rubbing housing	Correct seals and machine parts.
	Intermittent rumbles, rattles, clicks, etc.	Too much clearance in bearing	Correct shaft fit. For radial bearings, use adjusting spring or bearing with less internal clearance. For preloaded paired bearings, check for correct preload.
		Dirt in bearing	Wash all parts, replace with new bearing if necessary, use clean lubricant, improve seals.
		Loose machine parts	Tighten all fans, pulleys, closures, spacers, slingers etc.
TEMPERATURE	High after first start	Grease redistribution	Allow machine to cool. Restart.
	Continuously high during operation	Churning of lubricant	Use lower oil level, less grease, stiffer grease.
		No lubricant	Add lubricant.
		Excessive axial load	Check outer ring fit in housing and/or shoulder location to allow thermal expansion.
		Excessive radial load	Use correct fit of inner ring on shaft. For radial bearings, use bearing with greater internal clearance. For preloaded paired bearings, use lighter preload.
		Bearing misaligned	Correct machine parts and alignment procedures.
		Excessive seal drag	Use different type of seal.

TECHNICAL INFORMATION

Trouble	Observed Characteristic	Probable Cause	Corrective Action
EXCESSIVE VIBRATION	During acceleration or deceleration periods	Critical speeds of machine components	Stiffen shaft or other machine components to avoid critical speeds.
	During operation at fixed speeds	Unbalanced rotating parts	Dynamically balance rotating parts.
		Shaft bent	Straighten and re-balance.
		Cams, gears, linkage	Adjust, improve or redesign.
		Misalignment	Correct machine parts.
		Bearing brinelled	Replace bearing, avoid brinelling.
RUNOUT	Shaft does not run true. Shaft binds when rotated by hand.	Shaft bent	Straighten shaft and re-balance.
		Bearing misaligned	Correct machine parts and alignment procedures.
		Bearing rings out of square	Check squareness of shaft and housing shoulders, spacers and flingers, etc.
		Dirt	Wash all parts, replace with new bearing if necessary, use clean lubricant, improve seals.
		Machine deflection	Stiffen machine members.
INNER RING WEARS LOOSE ON SHAFT	Wear of the shaft seat	Incorrect shaft fit	Use recommended shaft fit.
		Poor shaft finish	Smooth turn or grind shaft to size after metalspraying or chrome plating.
OUTER RING WEARS LOOSE IN HOUSING	Wear in housing bore	Housing fit too loose	Use recommended housing fit.
		Unbalanced forces	Dynamically balance rotating parts. Clamp outer ring faces. Use cylindrical roller bearing and press fit outer and inner rings.
		Poor finish	Bore or grind housing I.D. oversize, press in a bushing and finish bore or grind to size.
		Soft housing material	Use steel liners. Work-harden bore.

NTN Bearings

Tolerance Tables and Interchange Data

TOLERANCES

Definitions pertaining to tolerance limits for boundary dimensions, various runouts, and internal clearance are given in AFBMA Standard 4, ANSI B3.4: *Tolerance Definitions and Gaging Practice*. The tolerance limits listed in this Standard refer exclusively to these concepts.

SYMBOLS COMMON TO RADIAL BEARINGS AND THRUST BEARINGS

d	=	Basic bore diameter
D	=	Basic outside diameter
V_{dp}	=	Single radial plane bore diameter variation
V_{Dp}	=	Single radial plane outside diameter variation
$r_{a\ max}$	=	Largest shaft and housing fillets which the bearing chamfer must clear
r_s	=	Single chamfer dimension of a ring
$r_{s\ min}$	=	Low limit of r
$r_{s\ max}$	=	High limit of r

SYMBOLS APPLICABLE TO RADIAL BEARINGS

B	=	Basic width of an individual inner ring; also of an individual outer ring when both rings have the same basic width
B_s	=	Single width of an inner ring; also that of an outer ring when both rings have the same basic width
V_{dmp}	=	Mean single plane bore diameter variation
V_{Dmp}	=	Single plane mean outside diameter deviations
K_l	=	Radial runout of an inner ring raceway
K_e	=	Radial runout of an outer ring raceway
S_d	=	Reference side runout with bore of an inner ring
S_D	=	Outside cylindrical surface runout with reference side of an outer ring
S_{ia}	=	Assembled bearing inner ring (or cone back face) runout with raceway
S_{ea}	=	Assembled bearing outer ring (or cup back face) runout with raceway
V_{Bs}	=	Width variation of an inner ring; also that of an outer ring when both rings have the same basic width

SYMBOLS APPLICABLE TO SINGLE DIRECTION THRUST BEARINGS

H	=	Basic bearing height
H_m	=	Actual bearing height
A_i	=	Raceway runout with flat seat face of shaft washer
A_e	=	Raceway runout with flat seat face of housing washer

TOLERANCE CLASS ABEC-1, RBEC-1

Tolerance limits for:

Metric ball and roller bearings (except tapered roller bearings) conforming to basic boundary plans.

① For Instrument Ball Bearing tolerances see AFBMA Standard 12, ANSI B3.10.

② Bore tolerance limits do not apply to tapered bore inner rings.

③ Does not apply to roller bearings or self-aligning ball bearings.

④ This refers to a ball bearing on which one or both sides are modified so two or more bearings can be mounted side by side as a unit.

⑤ For bearings with shields or seals of diameter series 9 and 8, *D_s* is not restricted.

⑥ Applies to bearings of width series 1 or narrower.

⑦ No values have been established for capped bearings.

TOLERANCE CLASS ABEC-7

Tolerance limits for:

Metric radial and angular contact ball bearings (except instrument bearings①).

- ① For Instrument Ball Bearing tolerances see AFBMA Standard 12, ANSI B3.10.
- ② Does not apply to self-aligning ball bearings.
- ③ This refers to a ball bearing on which one or both sides are modified so two or more bearings can be mounted side by side as a unit.
- ④ For bearings with shields or seals of diameter series 9 and 8, *D_s* is not restricted.
- ⑤ Applies to bearings of width series 1 or narrower.
- ⑥ No values have been established for capped bearings.

TOLERANCE CLASS ABEC-9

Tolerance limits for:

Metric radial and angular contact ball bearings (except instrument bearings ⑤).

Table 4 (Tolerance Limits in 0.0001 inch)

① Applies to bearings of metric width series 1 or narrower.

② Does not apply to self-aligning ball bearings.

③ This refers to a ball bearing on which one or both sides are modified so two or more bearings can be mounted side by side as a unit.

④ These limits apply before seals or shields are inserted.

⑤ For Instrument Ball Bearing tolerances see AFBMA Standard 12, ANSI B3.10.

⑥ No values have been established for capped bearings.

Tolerance Limits for Dimensions and Runout.

There is only one class of tolerances established for thrust ball bearings.

They conform with those adopted by ISO (ISO Recommendation R199).

Tolerance Limits for:

Metric single direction thrust ball bearings (of dimensions conforming to the basic plan for boundary dimensions of single direction, metric thrust bearings).

Table 5 (Tolerance Limits in 0.0001 inch)

① *dm* is defined as the arithmetical mean of the largest and the smallest single diameter of the bore obtained by two-point measurements.

② The values of deviation of *d* are valid for two-point measurements only.

Deviations of *d* for Class 0 apply only to diameter series 0, 2 and 3, and do not apply to either of the following cases: over 40 mm of *d* in diameter series 0, or over 180 mm of *d* in diameter series 2.

Deviations of *d* for Class 6 apply only to diameter series 0, 2 and 3, and do not apply to the case of over 60 mm of *d* in diameter series 0.

Deviations of *d* for Class 5 apply only to diameter series 0, 2 and 3.

③ KB is the symbol for limit deviations of *dm* and *d* for Class 0.

REMARKS:

The high deviations of bore diameter specified in this table do not apply within a distance of twice the nominal ring chamfer dimension from the ring face.

④ *D_m* is defined as the arithmetical mean of the largest and the smallest single diameter of the outside surface obtained by two-point measurements.

⑤ *hB* is the symbol for limit deviations of *DM* and *D* for Class 0.

⑥ The values of deviation of *D* are valid for two-point measurements only.

Deviations of *D* for Class 0 apply only to diameter series 0, 2 and 3, and do not apply to either of the following cases: over 80 mm of *D* in diameter series 0, or over 315 mm of *D* in diameter series 2.

Deviations of *D* for Class 6 apply only to diameter series 0, 2 and 3, and do not apply to the case of over 95 mm of *D* in diameter series 0.

REMARKS:

The low deviations of outside diameter specified in this table do not apply within a distance of twice the nominal ring chamfer dimensions from the ring face.

Tolerance limits for:
Tapered roller bearings with "J" prefixed part numbers.

REMARKS:

When measuring radial internal clearance, a slight amount of elastic deformation of the bearing occurs. The resulting measured clearance is slightly larger than the true clearance, and must be accounted for. These compensation values are given in tables 19 and 19-A.

Standard tolerance values for radial internal clearance of cylindrical roller bearings with cylindrical bore and interchangeable component.

Example: UCP205D1 (11) grease fitting on the location capital "B."

APPENDIX II BEARING RATINGS & FITTING PRACTICE

BEARING RATINGS

The following load rating information applies to radial, angular contact and tapered roller bearings, but not specifically to thrust bearings. When determining load ratings, remember that all ratings are not absolute.

STATIC LOAD RATING

The static load rating is the *Radial* load that will cause a certain amount of immediate damage to the internal operating surfaces of the bearing. This level of surface damage is acceptable in most cases but in some demanding situations may cause too much noise, so a much lower load limitation may be necessary. A higher load may be feasible if subsequent noise is not intolerable.

Actual noise levels are very dependent upon speed so if the speed is low, more surface damage can be accepted. Also, tolerable noise levels vary depending upon the application.

The static load rating has nothing to do with allowable *Axial* or *Thrust* loading. In most cases, axial ratings are much lower than those in this catalog so please consult NTN when such loads approach 25% of this rating.

DYNAMIC LOAD RATING

The dynamic load rating has no direct significance other than that it is a number which, along with speed, must be used in an equation to calculate theoretical bearing life. Load usage of this magnitude is usually very inappropriate. Life will be too short and the bearing may become noisy if the static load rating is exceeded. The rating can be used to compare different bearings if the life equations that apply to them are the same.

LIMITING SPEEDS

Limiting speeds are shown for oil and grease and contact seals when appropriate. However, many factors are omitted in this simplified rating that can affect the actual limit in a given case. Although many applications can run at much higher speeds, it is prudent to take precautions and consult NTN when speeds exceed 75% of the limit.

APPENDIX II BEARING RATINGS & FITTING PRACTICE

FITTING PRACTICE

The following five tables list the most likely suggestions for shaft and housing bore diameters for the more popular bearing series. The values in the tables provide the allowable deviations from the nominal diameters for most normal conditions.

UNUSUAL CONDITIONS

Different fits may be required for unusual conditions of loading, speed, temperature, housing or shaft material, wall thickness, vibration, poor surface finish and so on. For example, tighter fits are required for heavy loads, vibration, hollow shafts or thin housings, light alloy or plastic housings, etc. Consult NTN when in doubt.

ROTATING LOADS

The tables assume that the direction of load is constant. Where load rotates, reverse the rotating and stationary fits.

EFFECT ON CLEARANCES

The fits shown will usually work well with standard or C3 clearance bearings. Minor fit differences of .0001" or .0002" can usually be ignored but greater differences may require the use of other clearance classes.

AN EXAMPLE to illustrate the use of the tables:

A 6218 ball bearing has a **nominal** 90mm bore and a **nominal** inch bore of 3.5433". Assuming normal conditions, its shaft size is found in table 1. The 5th column, shows +7 to +1. These deviations applied to the **nominal** 3.5433" give a shaft size range of 3.5440" to 3.5434".
